Red PredatorBy BobThe book has outstanding war photographs that any historian or modeller will enjoy. The book also provides statistics, design and maintenance data, and information on T34 aces. This book is well written and good reading.

It could be said that the T-34 was the tank that won the Second World War. In total 57,000 were produced between 1941 and 1945. Stalin's tank factories outstripped Hitler's by a factor of three to one, and production of the T-34 also exceeded that of the famed American M4 Sherman. Not only did this output swamp German panzer production, the T-34 was a robust no frills war-winning design – easy to manufacture and reliable. Its sloping armor was innovative at the time and its wide tracks suited it to off-road warfare. Crucially it required little maintenance in comparison to German tanks, and its chassis was used as the basis for a range of assault guns, the SU-85, SU-100 and SU-122. Anthony Tucker-Jones's photographic history of this exceptional armored vehicle follows its story through the course of the war, from its combat debut against the Wehrmacht during Operation Barbarossa, through the Red Army's defeats and retreats of 1941 and 1942 to the tide-turning victories at Stalingrad and Kursk and on through the long, rapid Soviet advance across Ukraine and Byelorussia to Berlin. As well as a range of rare archive photographs and photographs of a surviving example of the T-34, the book features specially commissioned color illustrations.
