time, one woven inch a day. It's hard for us nowadays when every piece of clothing from our skin to winter hats gloves come from every country in the world, made on machines. My kind of history book: it takes a handstitched/woven relic expands on its past future, reminding us that after the War for Independence, America headed straight into the Industrial Revolution which had historic life-changing influences on the family unit. Imagine how treadle sewing machines changed women's clothes. Have given a copy to all the women in my life whether they sew or not, we talk/email about it. Amazing the attitudes: One of the first reactions was from a friend 16 years older: "Women were such slaves then!" I reminded her that her husband still labors for hours every single day in the fields of their farm. 30 years ago this would have fed the Feminist Fire, today, Feminist though I be, I'm old enough to read it for the information, vision wisdom it transfers. 6 of 6 people found the following review helpful. Every Artifact Has a Story By Sabrina Peters-Whitehead In the Age of Homespun, Ulrich examines "homespun" artifacts or artifacts relating to the creation and storage of homespun goods in early colonial America. Each chapter of her text is devoted to a particular artifact, such as an Indian basket, spinning wheels, a Niddy-Noddy, a chimneypiece, a pocketbook, linens, and a cupboard. However, the chapters are not merely about these artifacts. Instead, Ulrich uses the artifacts as a lens or a vehicle through which she examines the complex social, cultural, economic, and political dynamics of the time period the artifact stems from. Further, Ulrich uses these articles to "write" history--women's history--that has largely been unwritten in history texts. Each chapter of her text really undermines the myth of an idyllic and pastoral society and provides a fascinating look at the complexity of the times. 0 of 0 people found the following review helpful. These books for charming! By Kathryn These books for charming!

They began their existence as everyday objects, but in the hands of award-winning historian Laurel Thatcher Ulrich, fourteen domestic items from preindustrial America--ranging from a linen tablecloth to an unfinished sock--relinquish their stories and offer profound insights into our history. In an age when even meals are rarely made from scratch, homespun easily acquires the glow of nostalgia. The objects Ulrich investigates unravel those simplified illusions, revealing important clues to the culture and people who made them. Ulrich uses an Indian basket to explore the uneasy coexistence of native and colonial Americans. A piece of silk embroidery reveals racial and class distinctions, and two old spinning wheels illuminate the connections between colonial cloth-making and war. Pulling these divergent threads together, Ulrich demonstrates how early Americans made, used, sold, and saved textiles in order to assert their identities, shape relationships, and create history.

From Publishers Weekly In 1851, when theologian Horace Bushnell stood on the village green in Litchfield, Conn., and looked back lovingly on the "Age of Homespun," he was expressing a perennial American nostalgia for the "good old days," when clothing and other necessities were mostly made at home by family labor. Historian Ulrich (author of the Pulitzer Prize-winning *A Midwife's Tale*) has not set out to deflate the sentimentality that accompanies Bushnell's vision, but rather to trace its genesis and understand how it has weathered the test of time. In her previous works, Ulrich studied the lives of ordinary people, examining their diaries and what they left for probate when they died in order to understand their place in history. Here, under the tutelage of various museum curators, Ulrich shifts toward a material culture study studying objects to understand the people who used them. From 14 artifacts of early American life (baskets, spinning wheels, needlework, etc.), Ulrich uncovers details about their makers and users and the communities they built. Eighteenth-century New England was a battleground of Indian, colonist, slave and European cultures, and each left its mark on the design of these "surviving objects." A quote from Bushnell and an illustration of an object open each chapter. What follows is anything from a rambling digression on a particular cabinet's provenance to a detailed discussion of how dyes were made or flax prepared. As fascinating as the book can be, though, general readers may give up halfway through, finding it frustratingly diffuse and too much of a patchwork. But early Americanists, historical sleuths and "textilians" will delight. 165 illus. Copyright 2001 Cahners Business Information, Inc. From Library Journal Items produced in the home to be used by their owners and treasured by later generations are worthy of study in their own right, but they also tell us much about those who made and kept them. Ulrich, author of the Pulitzer Prize-winning *A Midwife's Tale: The Life of Martha Ballard Based on Her Diary, 1785-1812*, again offers brilliant insights into the lives of early Americans, as she examines their material culture as well as their lives. This engaging combination of women's studies, history, and the study of museum artifacts will delight a wide variety of readers. Chapter by chapter, Ulrich presents interesting early American objects and follows their description with the even more fascinating stories of the people who owned them and the world in which they lived. This work, approachable for the casual reader but based upon firm scholarship, would be a welcome addition to most larger academic and public libraries. Theresa McDevitt, Indiana Univ. of Pennsylvania Copyright 2001 Reed Business Information, Inc. From Booklist Eleven artifacts common to the decades between the seventeenth and nineteenth centuries--from an ordinary cross reel to wind yarn to a much-coveted Hadley cupboard--come alive in the skillful prose of the author of the Pulitzer Prize-winning *A Midwife's Tale* (1990). In fact, each chapter reads like a well-crafted detective story. She starts, for instance, by trying to identify the piece's provenance, and then branches out into geography, genealogy, history, and other "ologies," weaving a fascinating story in the process. We learn that a Boston

framed needlepoint, hung by Eunice Borne over the fireplace, borrows some inspiration from a similar French stitchery; that wigwams represented another form of weaving; and that cupboards, their painted surfaces aside, were structures for preserving and displaying family wealth. Clearly, Ulrich takes her tender, loving time in "study[ing] the flow of common life," in order "to discover the electricity of history," and the result is an edifying, entertaining voyage for any reader.
