**The Gübelin Foundation : The Eduard Josef Gübelin Story: The Art and Science of Gems** before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Eduard Josef Gübelin Story: The Art and Science of Gems:

One of the world's leading experts on gemstones and photomicrography, Eduard Josef Gübelin (1913-2005) acquired an outstanding international reputation from his collection of precious stones and his scientific contributions. His lifelong study of inclusions in gemstones dramatically altered the field of gemology forever and laid the foundation for the microscopic identification of many new types of gemstones. In addition to his scientific work, Gübelin also amassed a remarkable collection of gemstones, which was bought by the Gemological Institute of America, and he spent his life as a keenly active participant in art and film. Written by several of his family members, The Eduard Josef

Gübelin Story delves deeply into Gübelin's life story and explores how his early years laid the foundation for his extraordinary gemologist career, his research, and his legacy.
